Abstract *Staphylococcus aureus* is a leading cause of nosocomial infection. The purpose of this study was to determine the prevalence of *S. aureus* in the hospital environment and to identify the risk factors for colonization. A total of 100 samples were collected from the hospital environment, including 50 from the intensive care unit (ICU) and 50 from the general ward. The results showed that the prevalence of *S. aureus* was 40% in the ICU and 20% in the general ward. The risk factors for colonization were identified as the use of antibiotics, contact with medical equipment, and colonization of the nasal cavity.
